

IN THE CLAIMS:

Please amend claims 3-12 as follows:

Sub 106
A2
3. (Amended) The vehicle as claimed in claim 2, in which the speed of motion, along a favored axis (F) of the sensor (7) or along the resultant axis (R') of the sensors (7A', 7B') of the control system, which speed is determined on the basis of the signals supplied by each sensor, is utilized for the control of the actuator mechanism, in the event of the detection of a motion.

4. (Amended) The vehicle as claimed in claim 2, in which the distance traveled, along the favored axis (F) of the sensor (7) or along the resultant axis (R') of the sensors (7A', 7B') of the control system, which is determined on the basis of the signal supplied by each sensor, is utilized for the control of the actuator mechanism, in the event of the detection of a motion.

5. (Amended) The vehicle as claimed in claim 4, in which the distance traveled such as determined, along the favored axis (F) of the sensor (7) or along the resultant axis (R') of the sensors (7A', 7B') of the control system, on the basis of the signals supplied by each sensor, in the event of the detection of a motion, is utilized for travel or angular opening control purposes, at the level of the actuator mechanism.

6. (Amended) The vehicle as claimed in claim 5, in which the orientation of the sensor or sensors on the vehicle is fixed in such a way that the favored axis of each sensor of the control system which is associated with the actuator mechanism of an openable-panel is oriented so as to detect motions occurring in at least one of the directions corresponding respectively to the direction of opening or of closing of the openable-panel.

7. (Amended) The vehicle as claimed in claim 6, in which the openable-panel actuator mechanism (1) which is controlled is an openable-panel opening and/or closing electromechanical or mechanical assembly.

8. (Amended) The vehicle as claimed in claim 7, in which the openable-panel control system is associated with a "hands free" access device (4, 5) which controls a mechanism for locking/unlocking (2) at least one lock of an openable-panel of the vehicle.

9. (Amended) The vehicle as claimed in claim 8, in which the openable-panel control system acts on an actuator mechanism (1) ensuring the opening and/or the closing of an openable-panel (8 or 8'), this control system comprising one or more motion sensors (7 or 7A', 7B') disposed on the openable-panel or in proximity to the openable-panel on the vehicle.

10. (Amended) The vehicle as claimed in claim 9, in which the control system comprises one or more motion sensors, of the ultrasound transmitter/receiver type.

11. (Amended) The vehicle as claimed in claim 9, in which the control system comprises one or more motion sensors, of the microwave frequency signal transmitter/receiver type.

12. (Amended) The vehicle as claimed in claim 11, in which the means (3 and 7 or 7A', 7B') for controlling an openable-panel actuator mechanism (2) are designed so as to determine the control action to be effected as a function of the direction of motion as defined on the basis of the signal supplied by the sensor or sensors, preferably on the basis of a predetermined minimum threshold value of motion.
